Does your test make the cut-off?

For improved sensitivity and to gain the assurance you need, start testing for lower drug levels today. **Now you'll know.**

ANNOUNCING LOWER CUT-OFF LEVEL DEVICES THAT MEET SAMHSA'S NEW RECOMMENDED GUIDELINES.

The point-of-care screening device you select should be from an innovative and experienced leader. Now with lower limit of detection devices, we can say with confidence that the Reditest® Panel-Dip will enable you to easily administer, evaluate and certify on-site tests.

WHY TEST AT LOWER CUT-OFF LEVELS?

A credible drug test program accurately identifies even the slightest level of substance use. Monitoring drugs at lower thresholds can prove useful for a variety of industries—particularly in criminal justice and addiction treatment situations where cut-off levels can be more aggressive. Highly sensitive tests are ideal for drug use deterrence, offender monitoring, drug treatment admission and management, and for companies adopting no-drug tolerance policies. Combined with lab confirmation, Reditest devices provide a comprehensive drug test solution.

Call us to discuss how these new cut-off levels can help your agency:
Amphetamine 300 ng/mL¹, Cocaine 150 ng/mL², Methamphetamine 500 ng/mL², MDMA 500 ng/mL². Opiates also available at 300 ng/mL.

FEATURES & BENEFITS

- Accurately identifies many drug classes at lower cut-off levels; consistent with recent SAMHSA recommended guidelines
- Detects drugs for a longer period—extending the detection window
- Provides assurance that low drug levels or dilute specimens will not go undetected
- Same simple to perform Panel-Dip tests—with easy to read qualitative results in just 5 minutes
- FDA 510(k) cleared to market device provides results comparable to lab screening methods
